-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 and 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bowden in view of Hautier.

Bowden disclose a wheel comprising a first section and a second section, each section including a rim portion, a hub portion, and a spoke portion connecting the hub portion and the rim portion. The first and second section are joined by bolts at the rim and the hub. A spinner component is not disclosed.

Hautier teaches the use of a spinner component 1 in a cycle wheel for stabilizing the wheel by a gyroscopic action. The spinner component includes a cylindrical hub 2 located between the spokes and supported for rotation on the hub of the wheel by bearings 3, 4. From this teaching it would have been obvious to apply a spinner component to the wheel of Bowden between the spokes for rotation on the hub in order to stabilize the wheel.

3. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bowden in view of Hautier as applied to claim 1 above, and further in view of Henderson.

The spinner component of Bowden as modified by Hautier does not include a plurality of radially extending projections.

Art Unit: 3617

Henderson teaches a spinner component for a cycle wheel comprising a cylindrical hub 30, a plurality of radially extending projections 29, and an outer ring 28. From this teaching it would have been obvious to form the spinner component of Bowden as modified by Hautier to include a plurality of radially extending projections as an obvious substitution and/or to move more the stabilizing weight toward the outer periphery of the spinner component.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references show other wheels and other spinner components.
